pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Scoring table:

IDENTITY\_NUC Gapop 10.0 , Gapext 1.0

Searched:

, number of

hits satisfying chosen parameters:

351203 seqs, 1:13238999 residues

CLASSIFICATION DATA:

APPLICATION NUMBER: PCT/US94/03784

FILING DATE: 06-APR-1994

ATTORNEY/AGENT INFORMATION:

INAME: BASTLAN, Kevin L.

REGISTRATION NUMBER: 34,774

REGISTRATION NUMBER: 15280-128-1PC

TELEFORMUNICATION INFORMATION:

TELEPHONE: (415) 543-9600

TELEFAX: (415) 543-9600

TELEFAX: (415) 543-960

ITELEFAX: (415) 543-961

SEQUENCE CHARACTERISTICS:

LENGTH: 8535 base pairs

TYPE: nucleic acid

STRANDEDNESS: single

TOPOLOGY: linear

MOLECULE TYPE: DNA (genomic)
APPLICANT: Fletcher, Jonathan A.

APPLICANT: Xiao, Sheng
TITLE OF INVENTION: HMGI(Y)-LAMA4* FUSION ONCOGENE,
TITLE OF INVENTION: ONCOPROTEIN AND METHODS OF USE
FILE REFERENCE: B0801/7135/ERP
CUBRENT APPLICATION NUMBER: US/09/258,373
CURRENT FILING DATE: 1999-02-26
EARLLER APPLICATION NUMBER: 60/076,401
EARLLER FILING DATE: 1998-02-28
NUMBER OF SEQ ID NOS: 22
SOFTWARE: FastSEQ for Windows Version 3.0

The ds cDNA was sonicated and size-selected in the range 350-550 bp. The 3' specific fragments were selected by streptavidin coated magnetic beads, ligated to non-palindromic BstXI adapters, NotI digested and directionally cloned into BstXI-NotI cut pcDNAII vector." a 44 c 49 g 28 t

                                                       Email: mEST@mail.nih.gov

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the non-normalized prefrontal cortex library cDNA Library Preparation:

M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB seq length: 0

The results demonstrated expression of human DS-CAM mRNA in foetal and adult brain, and foetal kidney. In addition, a breast carcinoma cell brain, and foetal kidney. In addition, a breast carcinoma cell line showed expression of human DS-CAM mRNA. DS-CAM polypeptides line showed expression of human DS-CAM mRNA. DS-CAM polypeptides for the polypeptides and nucleic acids are used to develop products for the detection, diagnosis and therapy of developmental and neurological and products for the detection, diagnosis and therapy of developmental and neurological and products for the detection, diagnosis and therapy of developmental and neurological and products for the detection, diagnosis and therapy of developmental and neurological and products for the detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       developmental and neurological abnormalities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DS-CAM1; Down syndrome-cell adhesion molecule; neural cell; signal transduction; trisomy 21; mental retardation; holoprosencephaly; corpus callosum agencsis; schizencephaly; diagnosis; assay; human; ds; ss.
This polynucleotide comprises cDNA tragment E51 that was isolated from a human trisomy 21 foetal brain (14-wk gestation) cDNA from a human trisomy 21 foetal brain (14-wk gestation) cDNA from the comprise to bacterial and plantificial chromosomes between E7S2 and MX1. E51 was used as a probe to screen the trisomy 21 foetal brain-tibrary. 62 Clones were isolated from the 2 million clones of the original library. Overlapping clones were obtained that were used to deduce a full-length sequence (see AAV31981) coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-SEP-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAV31982;

This cDNA clone codes for Down syndrome-cell adhesion molecule DS-CAMI (see AAM42086), a cell surface dycoprotein belonging to a novel subclass of the 1g superfamily with highest homology to neural cell adhesion molecules. A modified direct cDNA selection technique was applied to bacterial and PI artificial chromosomes between ETS2 and MXI by using cDNA from trisomy 21 human foetal brain. A unique cDNA [ragment, designated E51 (see AAV31982), was obtained and used to screen a trisomy 21 human foetal brain.

Further clones were obtained by exon trapping. The complete DS-CAM1 cDNA sequence was deduced from overlapping clones. A splice variant cDNA (see AAV31988), encoding non-membrane bound DS-CAM2 (see AAV42087), was also identified. The DS-CAM gene spans 900-1200 kb of genomic DNA and maps at chromosome DS-CAM gene spans 900-1200 kb of genomic DNA and maps at chromosome 21q22.2-22.3. The invention also provides murine DS-CAM partial sequences (see AAV31985-87), expression vectors and host cells, sequences (see AAV31985-87), expression vectors and host cells for amplification of DS-CAM nucleic acid.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (regenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as Down syndrome, mental retardation, holoprosencephaly, agencsis of the corpus callosum, or schizencephaly. Antisense oligonucleotides are used for inhibiting translation of mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 6604 BP; 1673 A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5054 cclgratgacctgcaggaag 5073

CC trapping, and the complete DS-CAM2 cDNA sequence was identified. CC trapping, and the complete DS-CAM2 cDNA sequence was identified. CC DS-CAM2 is a splice variant of membrane-bound NS-CAM1 (see ANM42086) CC DS-CAM2 is a splice variant of membrane-bound NS-CAM1 (see ANM42086) CC and is delected for the entire transmembrane domain. The DS-CAM CC and is delected for the entire transmembrane domain. The DS-CAM CC defects of the invention also provides murine DS-CAM partial CC transgenic animals, antisense oligonucleotides, and primers useful CC transgenic animals, antisense oligonucleotides, and primers useful CC transgenic animals, antisense oligonucleotides, and primers useful CC associated with developmental and neurological processes. They can CC be used in e.g., neurial prosthetic devices used in entubulation CC be used in e.g., includes can also be used in detection, diagnosis and CC nerves. The products can also be used in detection, diagnosis and CC therapy of developmental and neurological abnormalities such as CC the corpus callosum, or schizencephaly, agenesis of CC the corpus callosum, or schizencephaly. Antisense oligonucleotides or eused for inhibiting translation of mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DS-CAM2 (see AAM42087), an extracellular, soluble protein belonging to a novel subclass of the Ig superfamily with highest homology to neural cell adhesion Eolecules. A modified direct CDNA selection technique was applied to bacterial and P1 artificial chromosomes between ETS2 and MX1 by using cDNA from trisomy 21 human foetal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          brain. A unique cDNA fraquent, designated E51 (see AAV31982), obtained and used to screen a trisomy 21 human foetal brain (1 gestation) cDNA library. Further clones were obtained by exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5054 cetylatyacetyeacyaay 5073

This invention describes the novel human cell surface glycoproteins (SSGP-1 and CSGP-2. The products of the invention have antianemic, nootropic, neuroprotective and anticonvulsant activity and can be used for gene therapy. The encoding nucleic acids are useful for the diagnosis, treatment and prevention of hematologic disorders such as anemia, myeloproliferative disorders and lymphoma, karyotypic disorders such as Klinefelter syndrome and Turner syndrome, and neuronal such as klinefelter syndrome and Turner syndrome, and neuronal disorders such as akathesia, Alzheimer's disease, amnesia, catatonia, epilepsy and neurofibrumaiosis. The products of the invention are also useful as probes for mapping the gene sequences encoding CSGP-1 and the meabor of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful for diagnosing tumour in a mammal. The polypeptides, their agonists and antaqonists are useful treating a condition associated with expression or activity of the polypeptide. Conditions treated include obesity, diabetes or hyper-or hypo-insulinemia. The polypeptides are capable of inducing proliferation of mammalian kidney mesangial cells and are therefore useful for treating kidney disorders associated with decreased mesangial cell function such as Bergers disease or other nephropathies associated with Schonlein-Henoch purpura, cellac disease, dermatitis herpetiformis or Crohns disease. The nucleic acids may be used to generate transgenic animals for use in development and screening of therapeutically useful reagents and also for chromosome identification and disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel secreted and transmembrane polypeptides useful for diagnosing tumour in a mammal, for identifying agonists and antagonists of the polypeptide and for therapeutic use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a secreted or transmembrane polypeptide. The specification describes polypeptides designated PRO1484, PRO4334, PRO122, PRO1889, PRO1890, PRO1887, PRO1785, PRO4353, PRO4357, PRO4405, PRO4356, PRO4352, PRO4390, PRO4334, PRO4408, PRO5737, PRO4425, PRO5990, PRO60300, PRO4424, PRO4422, PRO4430 and PRO4499, PRO1889 polypeptide is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .ches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human
The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the prohybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, munitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases
                                                                                                                                                                                                                                                                                                                                                                                                                        Probe #3744 used to measure gene expression in human breast sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                09-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAI03753 standard; DNA; 1954

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     12-OCT-2001
                                                                          The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene sample derived from human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                            30-JUN-2000;

                                                                        The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      genetic

                                                                                                                                                                       The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the prob hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, staging, those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                probe; human; breast disease; breast cancer; development disorder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequences (1). (1) can have cytostatic, immunomodulatory and sequences (1). (1) can have cytostatic, immunomodulatory and neuroprotective activities, and can be used in gene therapy. (1) and proteins (11) encoded by then are used in high throughput screening assays to select DNA molecules, RNA molecules, peptide nucleic acids, minetics, peptides, proteins, agonists, antagonists, antibodies or their fragments, immunoglobulins, inhibitors, drug compounds and pharmaceutical agents. Expression of (1) in a sample indicates the differentiation of embryonic stem cells into a tissue selected from brain, heart, kidney, liver, lung, skeletal muscle or pancreatic tissues. (1) and (11) are used to produce an expression profile that defines a metabolic or developmental process, treatment, condition, disease or disorder. The gene profile can be used for diagnosis, and continue the gene profile and continues the gene is associated with a continue of the can be used for diagnosis.

                                                                                                                                                  The invention provides isolated human lung tumor nucleic acids and polypeptides. The polypeptides can be used for the treatment of lung cancer. The polypeptides and polypucteotides can be used to stimulate T cells or antigen presenting cells for use in the treatment of lung cancer. The polypeptides and monoclonal antibodies specific for the polypeptides can also be used to inhibit the development of lung cancer. Agents which bind the polypeptides can be used for detecting lung cancer and for monitoring the progression of lung cancer.
